

Magic Painting

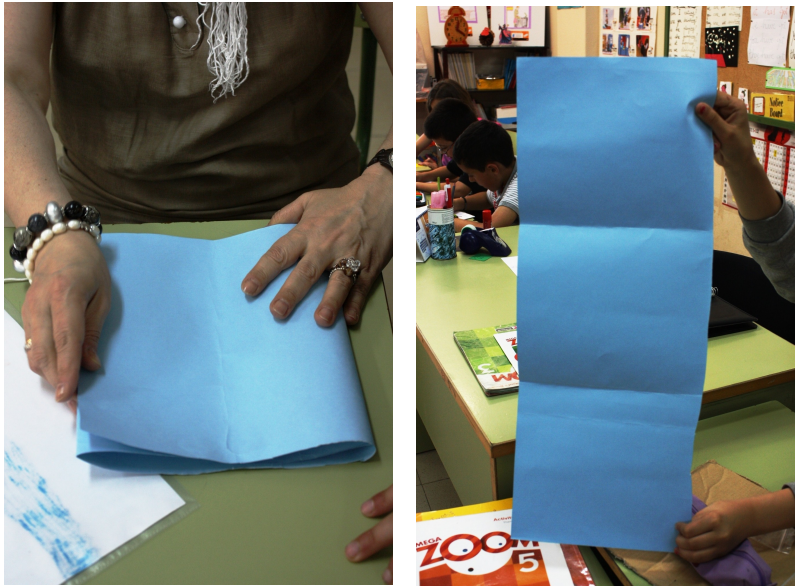

Materials

- A piece of cardstock
- Crayons
- Scissors
- A black permanent marker
- A sheet of white paper
- A plastic sleeve (e.g. a sheet protector)

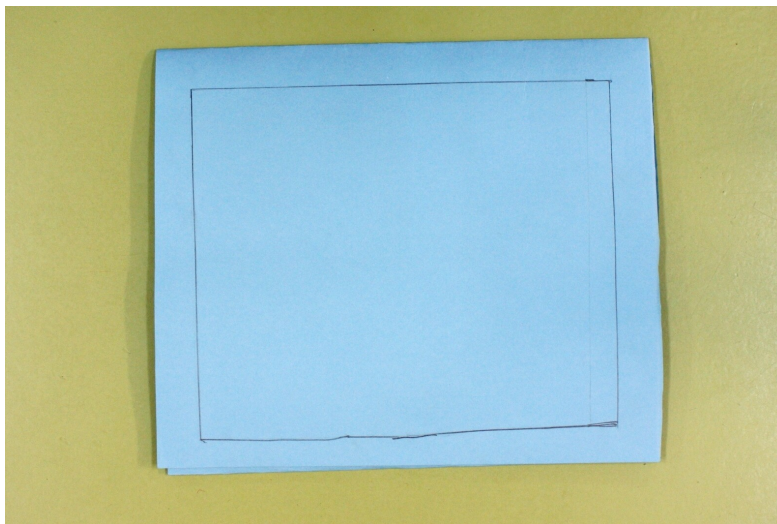

Vocabulary

Instructions

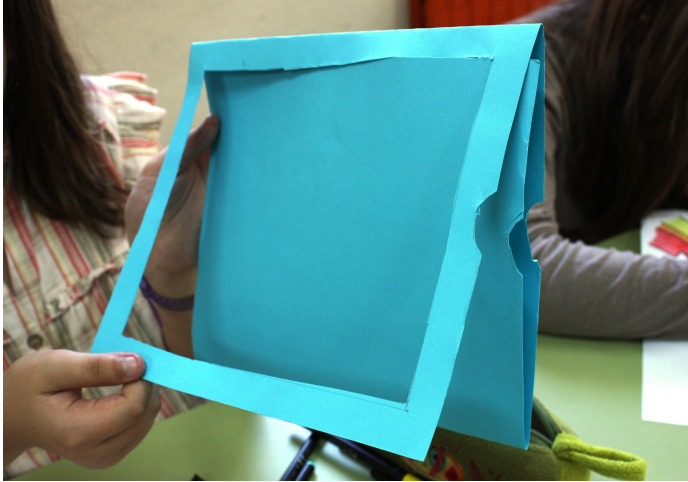

1. Fold the cardstock into three equal parts.

2. After folding the cardstock, draw a rectangle on the first part, about 3 cm wide. Then draw a semicircle on the right.

- Cut out the interior rectangle, making a frame.
- Cut out the semicircle, cutting through ALL 3 LAYERS of cardstock.

- Take a sheet of white paper, and if necessary, cut it to the same size as the folded cardstock.
- Draw a scene-- a landscape, seascape, outerspace scene-- whatever you like! Color the drawing well with crayons or markers.

7. Take your plastic sleeve and place the drawing inside. Trim the plastic sleeve so that it fits the drawing perfectly.

8. Glue the drawing to the back part of the plastic sleeve.
9. With your black permanent marker, trace the outlines of the drawing on the plastic.

10. Place the drawing behind the inner fold of carstock, so that it is hidden from view, while the piece of plastic with the black outline is in front of the inner fold of carstock, within the frame.
11. Pull the drawing from the semicircular tab, and the colored drawing appears behind the black outline!
